## EXECUTIVE SUMMARY

- **Number and Rate of Unusual Incidents, January - December 2010**

There were 6,009 unusual incidents during January-December 2010. The annual rate of unusual incidents was 105.1 incidents per thousand inmate population (see Table 2, p.6).

- **Rate of Unusual Incidents by Facility Security Level**

The rate of unusual incidents was highest in maximum security facilities with 159.7 incidents per thousand inmate population. Medium security prisons experienced a rate of 60.3; minimum security (including work release facilities), 149.3; Shock Incarceration facilities, 36.8; and Camp Georgetown, 11.5 (see Table 3.1, pp. 9-11).

- **Inmate Weapon Use**

Weapons were used by inmates in 26.8% of unusual incidents. Cutting or stabbing weapons were most often used during inmate assault on inmate and self-injury incidents. Use of body, such as fists or kicking, was most often used during inmate assault on staff incidents (see Table 4.2, p. 17).

- **Deaths**

There were 123 NYSDOCS inmate deaths reported in 2010. The total included 20 suicides and one homicide in NYSDOCS facilities. An additional 100 inmate deaths were due to natural causes (see Table 6, p. 20).

- **Inmate Assault on Staff**

There were 577 inmate assault on staff incidents in 2010. The annualized rate for maximum security prisons was 18.2 incidents per thousand inmate population; the rate for all facilities was 10.1 (see **Table 8.1, pp. 26-28**).

- **Inmate Assault on Inmate**

In 2010 there were 675 inmate assault on inmate incidents. The annualized rate for maximum security prisons was 19.7 incidents per thousand inmate population; the rate for all facilities was 11.8 (see **Table 8.3, pp. 33-35**).

- **Extent of Injury to Staff**

Most unusual incidents were resolved without injuries to staff. Of 22,343 staff members listed in unusual incidents, 96.1% did not incur an injury (see **Table 9.1, p. 40**).

- **Force Used to Resolve Incidents**

Department employees used force in 13.8% of unusual incidents in 2010. Force was used most often in inmate assault on staff incidents (see **Table 10.2, p. 42**).

## **INTRODUCTION**

The Unusual Incident System maintains information on incidents that occur within the New York State Department of Correctional Services (NYSDOCS). Events that disrupt or affect facility operations are considered unusual incidents and are reported by telephone to the DOCS Communication Control Center located in Albany and entered into the computer system via terminals at the correctional facilities.

The reporting system is capable of recording information on more than one type of unusual incident that occurs as part of a series of events. In concert with other information maintained in electronic databases, the Department can examine characteristics of victims and perpetrators involved in assaultive behavior, as well as identify all inmates and staff listed in incidents.

## Section One

### FREQUENCY OF INCIDENTS

A total of 6,009 unusual incidents were reported in 2010. Table 1 shows the type and number of incidents that occurred each month during the year. The number of unusual incidents fluctuates from month to month, and while monthly variations may be important, trend analyses that extend over months may be more meaningful.

The most frequently reported categories of incidents were contraband (N=2,485), inmate assault on inmate (N=675), and inmate assault on staff (N=577). Together, these three categories accounted for 62% of reported incidents. The reader should note that the deaths reported in Table 1 combines 123 inmates and 8 staff (see also page 20).

Table 1 Unusual Incident Type by Month January - December 2010

## Section Two

### ANNUALIZED RATE OF UNUSUAL INCIDENTS

The rate of unusual incidents is a ratio of the number of reported incidents to the inmate population. The rate measure used in this report is standardized per 1,000 inmates per year and allows for comparison between facilities and time periods. See Appendix A for an illustration and an explanation of the rate calculation methodology.

Table 2 displays the frequency and rate of unusual incidents by category. In 2010, there were 105.1 incidents per 1,000 inmates. Unusual incident rates for correctional facilities are presented in Section 3; rates of assaults by inmates on staff and other inmates are presented in Section 8. An additional method to examine unusual incidents is by inmate involvement. In 2010, there were 7,377 inmates listed in UI reports (see Section 5), a rate of 129.0 per 1,000 incarcerated inmates.

Table 2 Unusual Incident Frequency and Annual Rate January - December 2010		
Incident Type	Number of Incidents	Annual Rate
Accident	423	7.1
Assault on Inmate	675	11.4
Assault on Staff	577	9.7
Assault on Other	16	0.3
Contraband	2485	42.0
Death	131	2.2

Employee Job Action	0	0.0
Other Incidents	495	8.4
<b>Total</b>	<b>6009</b>	<b>105.1</b>

## Section Three

### NUMBER AND RATE OF UNUSUAL INCIDENTS BY FACILITY

The number and rate of unusual incidents are presented in a series of statistical tables on pages 9-14. The number and rate of incidents by correctional facility and security level appear in Table 3.1, pages 9-11; the number of incidents per month by facility and facility security level appear in Table 3.2, pages 12-14.

#### MAXIMUM SECURITY

Maximum security housing units reported 3,974 unusual incidents in 2010, a rate of 159.7 incidents per 1,000 inmates. Prisons that experienced the highest rates include Great Meadow (247.7) and Wende (233.5). Regional Medical Units (RMU), specialized facilities for chronically ill inmates, reported high rates of unusual incidents because of the large number of deaths that occurred among a small inmate population. Bedford Hills Correctional Facility imprisons female inmates and accounted for 77 unusual incidents, a rate of 102.7. Bedford Hills RMU reported one unusual incident for a rate of 71.4.

#### MEDIUM SECURITY

Medium security prisons reported 1,805 incidents in 2010, a rate of 60.3 incidents per 1,000 inmates. While housing 52% of the inmate population, medium security facilities accounted for only 31% of incidents. Included in the medium security level are ASACTC units (Alcohol and Substance Abuse Correctional Treatment Centers) which provide intensive counseling to inmates with histories of drug and alcohol abuse. A review of Table 3.1 reveals that Hale Creek (an ASACTC facility), as well as ASACTC units within medium security facilities (Arthur Kill, Taconic, and Wyoming), generally have a lower rate of unusual incidents when compared to other medium security facilities.

When compared with the overall rate for medium security facilities (60.3 incidents per 1,000 inmates), Washington Correctional Facility was somewhat higher (74.4) and Greene Correctional Facility was slightly higher (63.1). This is due in part to the large number and percentage of inmates aged 16-20 housed at these two facilities. Historically, younger inmates have higher rates of involvement in unusual incidents.

Bayview and Taconic CF are facilities housing female inmates that had a comparatively high rate of unusual incidents (114.6 and 82.2, respectively).

## **MINIMUM SECURITY**

The rate of unusual incidents at minimum security facilities in 2010 was 149.3 per thousand inmates. The minimum security category includes the following work release facilities: Buffalo, Fulton, Lincoln, and Rochester. At these four work release facilities, the large majority of unusual incidents (79% or 113 of 143) are instances of absconding from temporary release or arrest while on temporary release. Beacon incarcerates female inmates.

## **SHOCK INCARCERATION**

Five Shock Incarceration facilities, commonly referred to as boot camps, reported 35 incidents in 2010, a rate of 36.8 per 1,000 inmates. Lakeview Male, the largest Shock Incarceration Program, reported 17 incidents, a rate of 37.4 incidents per 1,000 inmates.

## **CAMP GEORGETOWN**

Camp Georgetown recorded 2 unusual incidents or a rate of 11.5 incidents per 1,000 inmates of population.

## **CENTRAL OFFICE**

Eight unusual incidents were reported by Central Office staff; including four accidents, one contraband, one incident of employee misconduct, one incident of lost property, and one miscellaneous incident were reported.

<b>Other</b>			
Central Office	0	8	N/A
Total	0	8	N/A
Grand Total	57182	6009	105.1

\*The rate of unusual incidents for Edgecombe C.F. is high (777.8) because the rate is based only on the average daily population of 18 cadre inmates at Edgecombe and not on the full population, which would include an average of 96 parolees. If the parolees were included, the average facility population would be 114 and the UI rate would be 122.8.

## Section Four

### INMATE WEAPON USE

Tables 4.1 (p. 16) and 4.2 (p. 17) show the most dangerous weapons used in unusual incidents. The count of weapons includes only the most dangerous weapon used in an incident and is not a count of all weapons in an incident. For example, in an inmate assault on inmate unusual incident, when two inmates with shanks (prison-made knives) attack another inmate who defends himself with a broom handle, a shank would be counted as the most serious weapon used in the assault incident.

In 2010, inmates used weapons in 26.8% of all unusual incidents. Table 4.1 shows that 5.1% of incidents involved the 'other' weapon category and included items such as garrotes, human waste, and unspecified or unknown weapons. A large number of unknown weapons are present in inmate assault on inmate incidents. In the majority of those cases, the weapon was not found by correctional staff but the injuries sustained by inmate victims were consistent with the type of injuries inflicted by cutting/stabbing weapons. The Unusual Incident reporting system categorizes unknown weapons as "unrecovered cutting or stabbing weapon" if injuries were consistent with use of those weapons.

Inmate weapon use is concentrated within a few unusual incident categories: inmate assault on inmate, inmate assault on staff, self-injury, and disruptive behavior (see Table 4.2). Inmate attacks on other inmates usually involved cut/stab weapons (N=436, 64.6%). In inmate attacks on staff, inmates most often used their body (N=474, 82.1%) to hit, kick, or bite correctional staff. Use of 'other' weapons in attacks on staff (N=85, 14.7%) included inmates throwing human waste and/or other fluids, such as water, juice or hot coffee, onto correction officers or other staff.

## Section Five

### INMATE ROLE IN INCIDENTS

Table 5.1 (p. 19) shows the role of inmates according to type of unusual incident. Inmate roles are divided into five categories: perpetrator, participant, suspect, victim, or witness. "Perpetrator" refers to the inmate who is responsible for the unusual incident (i.e., the individual who assaulted another person, started a fire, possessed contraband, or escaped from a facility). The "participant" role describes an inmate who is involved in an unusual incident but in a secondary capacity when compared to the perpetrator. An example would be an inmate who engages in a work stoppage but only after instigation by other inmates. "Suspect" refers to an inmate who is suspected of involvement in an incident but whose role will be determined after additional investigation. "Victim" refers to an inmate who has suffered an injury or loss due to the actions of other inmates, i.e., someone who has been assaulted or suffered smoke inhalation from a fire. The "witness/bystander" role describes an inmate who observed an unusual incident, or may have been present during an unusual incident but was not actively involved in the incident.

A total of 7,377 inmates were involved in unusual incidents in 2010. Specifically, there were 4,853 inmate perpetrators; 162 inmate participants; 1,232 inmate victims; 365 suspects; and 765 witnesses or bystanders. It should be noted that reporting system procedures enable an inmate's involvement to be counted several times depending upon the number of unusual incident reports filed as a result of a series of events. For example, if an inmate uses a knife in an assault of another inmate, the event may be reported in two categories - one for the assault incident, another for the inmate's possession of a weapon (contraband). While both unusual incidents are part of the same situation, the inmate would be listed as a perpetrator twice.

Table 5.2 (p. 19) shows the distribution of inmate roles by month for calendar year 2010.

## Section Six

### INMATE DEATHS

The number and cause of inmate deaths are shown in Table 6. The total differs from other statistical tables in this report because Table 6 reflects only the deaths of inmates who were in the Department's physical custody, transferred to other criminal justice agencies (but still in legal custody of NY DOCS), or given permission to leave DOCS facilities for work release, day reporting, or furlough. The table does not include deaths of correctional staff.

An unusual incident report is made immediately upon discovery of an inmate death, but the reporting officer may not know the cause of death. Further investigation by Health Services' staff and local medical authorities is required to determine the final official cause of death. Table 6 reflects information known at the time this report was written. In addition to inmate deaths shown in Table 6, unusual incidents included eight staff deaths. None of the staff deaths were due to inmate actions.

## Section Seven

### LOCATION OF UNUSUAL INCIDENTS

The location of unusual incidents and the incident type are shown in Table 7.1, p. 22. Locations are categorized into eleven primary areas. Most incidents (N=2,231, 37.1%) occurred in housing units which include general confinement housing as well as shower and bathroom areas. An additional 624 incidents (10.4%) were reported in the prison yard which is an open area inside the facility perimeter that inmates use for recreation and exercise. Special Housing Units (S.H.U.) house inmates in disciplinary segregation or for protection from other inmates and were the location of 305 incidents (5.1%).

The incident types most often occurring in the housing areas were inmate assault on staff (N=260), contraband (N=1,202), and inmate assault on inmate (N=238).

The fewest incidents were reported in visiting rooms (N=119, 2.0%), TV/Day Rooms (N=102, 1.7%), gymnasiums (N=113, 1.9%), and mess halls (N=122, 2.0%). Almost a quarter of the incidents, 1,441 or 24%, occurred inside the facilities, but in areas that did not fall into one of the nine coded areas.

Table 7.2 presents incident location by month of incident for calendar year 2010.

## Section Eight

### INMATE ASSAULT ON STAFF BY FACILITY AND MONTH OF INCIDENT

Table 8.1 (pp. 26-28) displays the number and rate of inmate assault on staff unusual incidents for 2010. The table provides information on the average daily population of each facility during the year, the number of assaults, and the annualized rate of inmate assault on staff incidents per thousand inmates of population. The annualized rate of inmate assault on staff incidents allows for standardized comparisons between security levels and facilities. A complete explanation of rate calculation is presented in Appendix A, page 43.

The highest number of assaults occurred in maximum security facilities with a reported 454 incidents for a rate of 18.2 incidents per 1,000 inmates of population. Both the number and rate of assaults on staff at maximum security prisons were considerably higher than medium and minimum security facilities. Medium security facilities experienced 114 inmate assault on staff incidents and all types of other facilities reported a total of 9 assault on staff incidents. The annual rate of assault on staff incidents was 3.8 at medium security prisons; 4.0 at minimum security facilities, which included work release facilities; and 4.2 at Shock Incarceration Facilities.

The total number of assault on staff incidents by facility by month is shown in Table 8.2 (pp. 29-31). Approximately 79% of the total number of assaults occurred in maximum security prisons; medium security facilities experienced 20% and other facilities (including Shock Incarceration facilities, minimum security facilities, and Camps) accounted for less than 2% of the total number of staff assaults.

## **INMATE ASSAULT ON INMATE UNUSUAL INCIDENTS**

A review of unusual incidents by security level of facility reveals that maximum security housing units had the highest rate of inmate assault on inmate incidents (19.7) (see Table 8.3). Medium security facilities experienced a rate of 6.1 incidents per 1,000 inmate population.

The annualized rate of inmate assault on inmate incidents allows for standardized comparisons between security levels and facilities. For example, the use of an annualized rate allows the reader to observe that Attica Correctional Facility, a maximum security prison with 27 inmate assault on inmate incidents and an average daily population of 2,156, has a similar assault rate (12.5) as Mid-State SHU200 Facility (12.1) with 2 inmate assault on inmate incidents and a population of 165.

Table 8.3 (pages 33-35) displays the average population of each facility, the total number of inmate assault on inmate incidents, and the annualized rate of incidents per thousand inmates. Table 8.4 (pages 36-38) presents data on the number of inmate assault on inmate incidents in correctional facilities by month of incident. For the 2010 time period, 73% (N=491) of inmate assault on inmate incidents occurred at maximum security institutions, including maximum security SHU200 and Regional Medical Units (RMU); 27% (N=183) at medium security prisons; and less than 1% (N=1) at Shock Incarceration or other minimum security facilities.

## Section Nine

### INJURY TO STAFF

The Unusual Incident reporting system uses a ranking procedure for injuries sustained by staff members and is based on seriousness of injury and/or by degree of treatment. "No injury" indicates that the staff member or medical staff reported that no injury was sustained. "Minor injury" refers to cases where the victim received a comparatively minor injury which may have been treated at the facility or treated at the facility with a recommendation for the staff person to consult their own physician. "Moderate injury" refers to injuries of a more serious nature that generally require treatment at an outside hospital or treatment by own physician. Moderate injuries are not judged to be life threatening. "Serious injury" refers to injury that is considered to be life threatening (or which results in death). These injuries require treatment at an outside hospital.

Table 9.1 (p. 40) presents information on the number of staff who participated in Unusual Incidents by category as well as the number of staff who sustained injuries in unusual incidents. Staff injuries are reported according to the degree of seriousness. The inmate assault on staff category produced the most staff injuries in 2010. The 577 assault on staff incidents resulted in minor injuries to 581 staff (22.3%), and moderate injuries to 32 staff (1.2%) of the 2,607 staff involved. There were no serious staff injuries as a result of inmate assault on staff incidents.

Table 9.2 (p. 40) presents information on staff injuries sustained each month. In 2010, 3.9% of staff involved in unusual incidents incurred an injury of some degree.

## **Section Ten**

### **USE OF FORCE BY MONTH OF INCIDENT**

During 2010, 13.8% of the unusual incidents entailed use of force to resolve the incident. A review by month shows a consistent pattern of between 84% and 89% of unusual incidents were resolved without staff use of force (see Table 10.1).

In the Unusual Incident reporting System, use of force by correctional staff is classified into eight categories. Table 10.1 (p.42) shows the most serious type of staff force utilized in each unusual incident. Over the year, 8% of incidents involved use of body holds and 2% involved use of handcuffs to restrain inmates. An examination reveals that the use of baton occurred in 1.5% of unusual incidents.

### **STAFF USE OF FORCE BY INCIDENT TYPE**

Table 10.2 (p.42) presents information on the type of force used during specific types of unusual incidents. Staff use of force was concentrated in the unusual incident categories of inmate assault on inmate, inmate assault on staff, contraband, and disruptive behavior.

## **APPENDIX A**

### **RATE CALCULATION METHOD**

Annualized rates are calculated as the number of unusual incidents per 1,000 inmate population per year. For example, the 6,009 incidents which were reported during January-December 2010 are divided by the average population (N=57,182), and multiplied by 1,000 to yield 105.1 incidents per thousand inmates. The same method is used to calculate the rate of unusual incidents at particular correctional facilities (the population base is the average population at the facility; see Table 3.1) and to calculate the rate of specific types of unusual incidents (where the numerator is the total incidents in each incident category and the population base is either the average of the total population or the average of the population of a facility).
