

# Corrections and Community Supervision

## **The Comprehensive Alcohol and Substance Abuse Treatment Program 2014**

## **CASAT PROGRAM**

The New York State Department of Corrections and Community Supervision (NYSDOCCS) Comprehensive Alcohol and Substance Abuse Treatment (CASAT) program was a creation of the 1989 Prison Omnibus Legislation.<sup>1</sup> This legislation called for the establishment of six 200-bed alcohol and substance abuse treatment annexes at specified locations. Persons successfully completing the six-month long annex phase of treatment (Phase I) would be transferred to a work release facility or an appropriate community based program (Phase II). The law also provided for an aftercare component upon release from the Department while under the supervision of the Division of Parole (Phase III). Appendix A diagrams the movement of the inmate through the CASAT program phases.

After briefly summarizing the CASAT program's history since 1990, this report focuses on recent program trends from 2006-2014. For an in-depth description of the CASAT program, please see *"The Comprehensive Alcohol and Substance Abuse Treatment Program: 2008"*.<sup>2</sup>

## **PROGRAM GOALS**

The CASAT program, with its mandate to provide a continuum of treatment services, is designed to achieve the following goals:

- To focus facility resources on the needs of inmates with a history of alcohol and substance abuse.
- To better prepare participants for return to their families and communities upon release.
- To reduce drug and alcohol relapse rates and recidivism rates for program participants.
- To ensure appropriate aftercare services in the community.
- To increase coordination among the pertinent State and local agencies, service providers, and community organizations.

---

<sup>1</sup> The New York State Department of Correctional Services and the New York State Division of Parole were merged through Legislative action on April 1, 2011. The resulting agency is the New York State Department of Corrections and Community Supervision.

<sup>2</sup> "The Comprehensive Alcohol and Substance Abuse Treatment Program: 2008," New York Department of Correctional Services, Albany, New York 12226 (2009).

## **CURRENT PROGRAM ELIGIBILITY**

- Documented history of alcohol and/or drug abuse.
- Minimum of 9 months to earliest release at the time of review to allow for sufficient program time, but no more than 24 months to merit eligibility (if, merit eligible) or earliest release date. One exception to this is that drug offenders may enter Phase I at 30 months to earliest release.
- Classified as medium or minimum security.
- Temporary release approvable except for some drug offenders sentenced by judges to CASAT treatment (court-mandated CASAT). Court-mandated CASAT offenders not meeting all CASAT program requirements, particularly temporary release eligibility, are permitted to enter Phase I but are not allowed to transition to Phase II. This group is referred to as Phase I-only participants. This program modification, implemented in May 2006, permits a larger pool of offenders to receive intensive, residential drug treatment. Court-mandated offenders who meet all established CASAT requirements are eligible to enter Phase II upon completion of Phase I.

The review for CASAT eligibility and the offender's interest in participating in a treatment program is conducted at reception or later at a general confinement facility between the inmate and the inmate's rehabilitation coordinator. Following this facility level review, information is forwarded to Temporary Release in Central Office for a final review of appropriateness for work release upon completion of CASAT Phase I. Those offenders found to be acceptable for temporary release represent the pool of potential participants for traditional CASAT Phase I and II programs.

## **PHASE I PARTICIPANT POPULATION: 1990-2005**

- New commitments to NYSDOCCS jumped from 4,250 (including 470 offenders committed for drug offenses) in 1970 to a high of 25,155 in 1992 (including 11,225 drug commitments) (see Appendix B). The CASAT program expanded in the early 1990s to meet the substance abuse treatment needs of these offenders (from 783 Phase I participants on June 30, 1991 to 2,369 Phase I participants on June 30, 1994, see Table 1.1 and Figure 1.1).
- Executive Order #5, issued in 1995, significantly impacted the CASAT program by precluding the participation of violent felony offenders in the Department's Temporary Release program. Further diminishing the pool of eligible offenders was the Sentencing Reform Act (SRA) of 1995, which created the Willard Drug Treatment Campus, designed to divert second felony offenders with substance abuse problems from NYSDOCCS incarceration. As a result of these two legal mandates, the CASAT Phase I program experienced an overall decline in participation from 2,369 on June 30, 1994 to 1,696 participants on June 30, 1996 (see Table 1.1).

- The CASAT Phase I population continued on a downward path most years (with the exception of 2000 when the population rose to 1,404) until 2003 when CASAT eligibility redefined “earliest release date” from parole eligibility date to merit eligibility date (an inmate’s merit eligibility date occurs before their parole eligibility date). This policy change produced a brief upswing in CASAT Phase I participation in 2003 to 992 participants, up from 926 in 2002 (see Table 1.1).

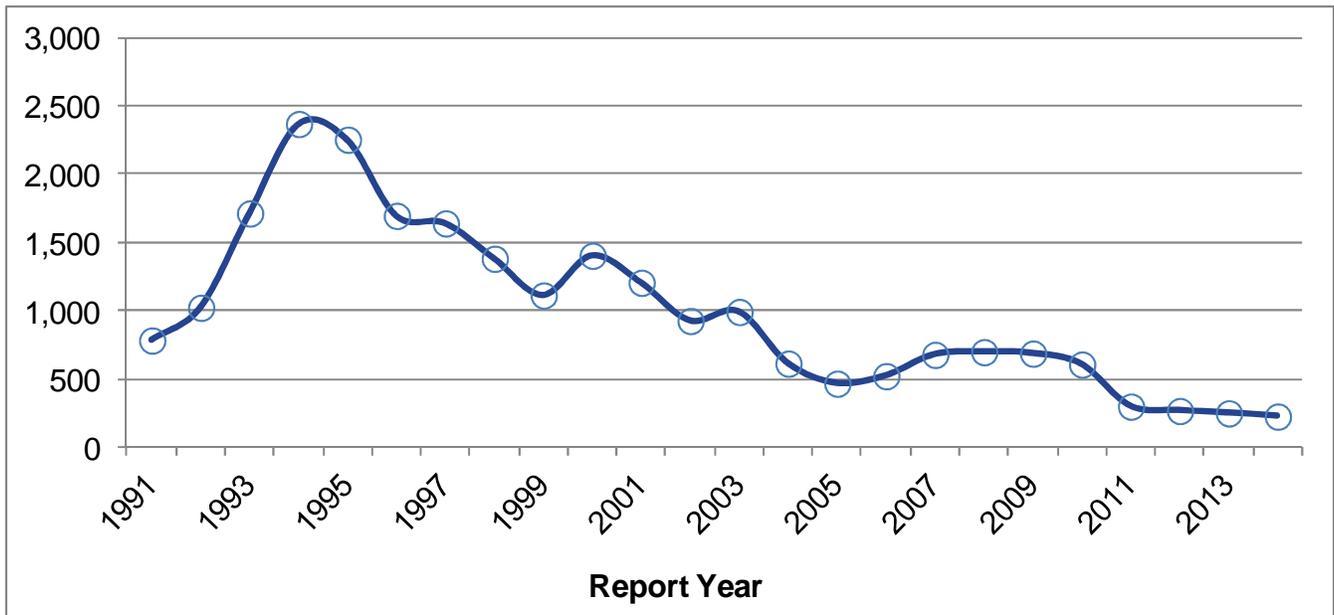

#### **PHASE I PARTICIPANT POPULATION: 2006-2014**

- Further declines in CASAT Phase I participation continued until 2006 when the first impact of permitting temporary release ineligible, court-mandated offenders in the CASAT program was observed as the program increased from 467 on June 30, 2005 to 522 participants on June 30, 2006 (see Table 1.1).
- After the introduction of the court-mandated, temporary release ineligible offenders in 2006, Phase I participation rose to over 600 participants in 2007. Phase I participation remained over 600 for the 2007-2009 reporting years and the first half of 2010 before declining. As a response to the steep decline in Phase I participation during the second half of 2010 and 2011, the Department closed Wyoming ASACTC (120 beds) in March 2011 and reduced the program capacity of Taconic ASACTC to 44 treatment beds (from 136 beds) in May 2011 (see Table 1.1 and Table 1.3). Remaining Wyoming CASAT participants were transferred to Arthur Kill and Hale Creek to complete Phase I.
- Over a ten-year period, 2002-2011, the NYSDOCCS experienced a significant reduction in its under custody population (66,691 on December 31, 2002 compared with 55,065 on December 31, 2011). The resulting, smaller prison population led to excess housing space in minimum and medium security facilities. During 2011 and 2012, consolidation or “right-sizing” of NYSDOCCS correctional facilities occurred. Seven medium and minimum security facilities were closed, including Arthur Kill. CASAT participants not nearing program completion were transferred to a new 60-bed program at Marcy Correctional Facility that opened in October 2011 (see Table 1.2).
- In December 2012, the program for female CASAT participants was moved from Taconic ASACTC to Albion Correctional Facility. The program capacity at Albion ASACTC is 30-beds.
- On July 4, 2014, there were only 226 Phase I participants (24 fewer participants than last year).
- The number of court-mandated, temporary release ineligible participants is also decreasing. On June 25, 2010, 317 (or 52%) of total Phase I participants (607) were temporary release ineligibles compared with 84 (or 37%) of the total Phase I population (226) on July 4, 2014 (see Table 1.2).

Source: DOCCS UC File

\*Some program beds at CASAT facilities are occupied by offenders either waiting to begin Phase I or Phase I completers awaiting transfer to work release or general confinement facilities. These offenders are not included in these figures.

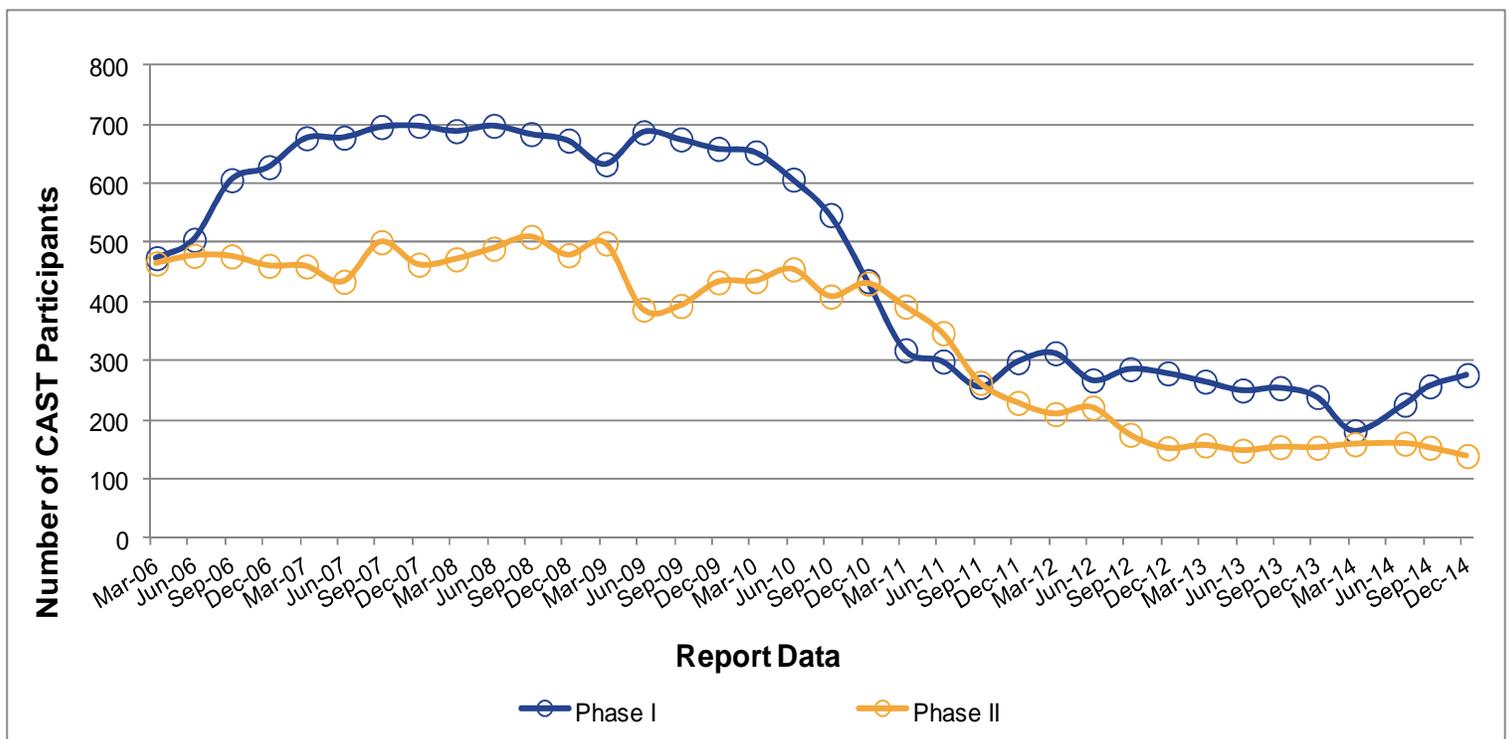

- As of July 4, 2014, 53% of all CASAT program beds were filled with participants. Albion was operating at 100% capacity, Marcy at 72% capacity while Hale Creek was at 46% capacity (see Table 1.2).

Recent declines in the number of offenders eligible for the CASAT program were a consequence of the sweeping Drug Law Reform Act of 2009, the elements of this law encouraged the expansion of Drug Courts and community-based substance abuse treatment in order to divert drug offenders from NYSDOCCS incarceration. Since the Sentencing Reform Act (SRA) of 1995, approximately **70% to 80%** of CASAT participants have been drug offenders; therefore any decrease in drug offender commitments to NYSDOCCS would reasonably be expected to impact the availability of offenders for the program. The number of drug offenders admitted in 2013 (3,097) was the lowest recorded since the CASAT program started, increasing slightly to 3,226 in 2014 (see Appendix B).

## CASAT PHASE I and PHASE II QUARTERLY TRENDS: 2006-2014

- Focusing on the most recent years of the CASAT program (March 2006 – July 2014), Table 1.3 and Figure 1.2 present quarterly Phase I and Phase II trends.
- The decline in Phase I participation was halted and partially reversed after mid-2006 until mid-2010 when the entrance of court-mandated, temporary release ineligible into the program increased Phase I participation numbers. By mid-2010, Phase I participation once again began to steadily decrease. The proportion of women in Phase I has also fallen. For example in June 2006, women comprised 14% of the Phase I population, 18% in June 2007 and 12% in June 2008. From 2010 through 2012, the proportion of women in Phase I ranged between 8% and 9%. However by June 2013, that proportion had risen slightly to 11% and by July 2014 women comprised 13% of the phase I population.
- Phase II participation numbers in 2014 (139 at year's end) fell to the program's lowest levels since the early 1990s (table not shown).

## CASAT PHASE II ----CONTINUING SUBSTANCE ABUSE TREATMENT

- After participating in an intensive, residential, therapeutic community-based substance abuse treatment component in Phase I, CASAT participants eligible to enter Phase II (work release) continue in substance abuse treatment. Men assigned to New York City work release facilities receive treatment services at their facility. In October 2012, Bayview Correctional Facility (female) was evacuated prior to Superstorm Sandy and was subsequently flooded. Women work release participants from the downstate area are now assigned to Edgecombe Correctional Facility (female) with outpatient treatment services provided by the Center for Community Alternatives.
- Starting in March 2007, men and women entering CASAT Phase II in upstate work release facilities began receiving treatment services from community outpatient treatment providers. This program is federally funded under a collaborative project with the New York State Office of Alcoholism and Substance Abuse Services. The number of participants attending weekly individual and/or group counseling sessions increased in June 2014 (46) compared with those being treated in June 2013 (34) (see Table 1.4).

## CONCLUSION

In view of the fact that approximately **70% to 80%** of the CASAT participants have been drug offenders since the Sentencing Reform Act (SRA) of 1995, the decline in the number of such offenders committed annually to NYSDOCCS in recent years has reduced the pool of inmate's eligible for the CASAT program. In 2006, 36% of all new court commitments were admitted for drug offenses, but by 2014 that proportion had fallen to 24%. Among women drug offenders the decline was comparable as 43% of all female new court commitments in 2006 were admitted for drug offenses versus 30% in 2014, although this is a marked increase from 25% the year prior.

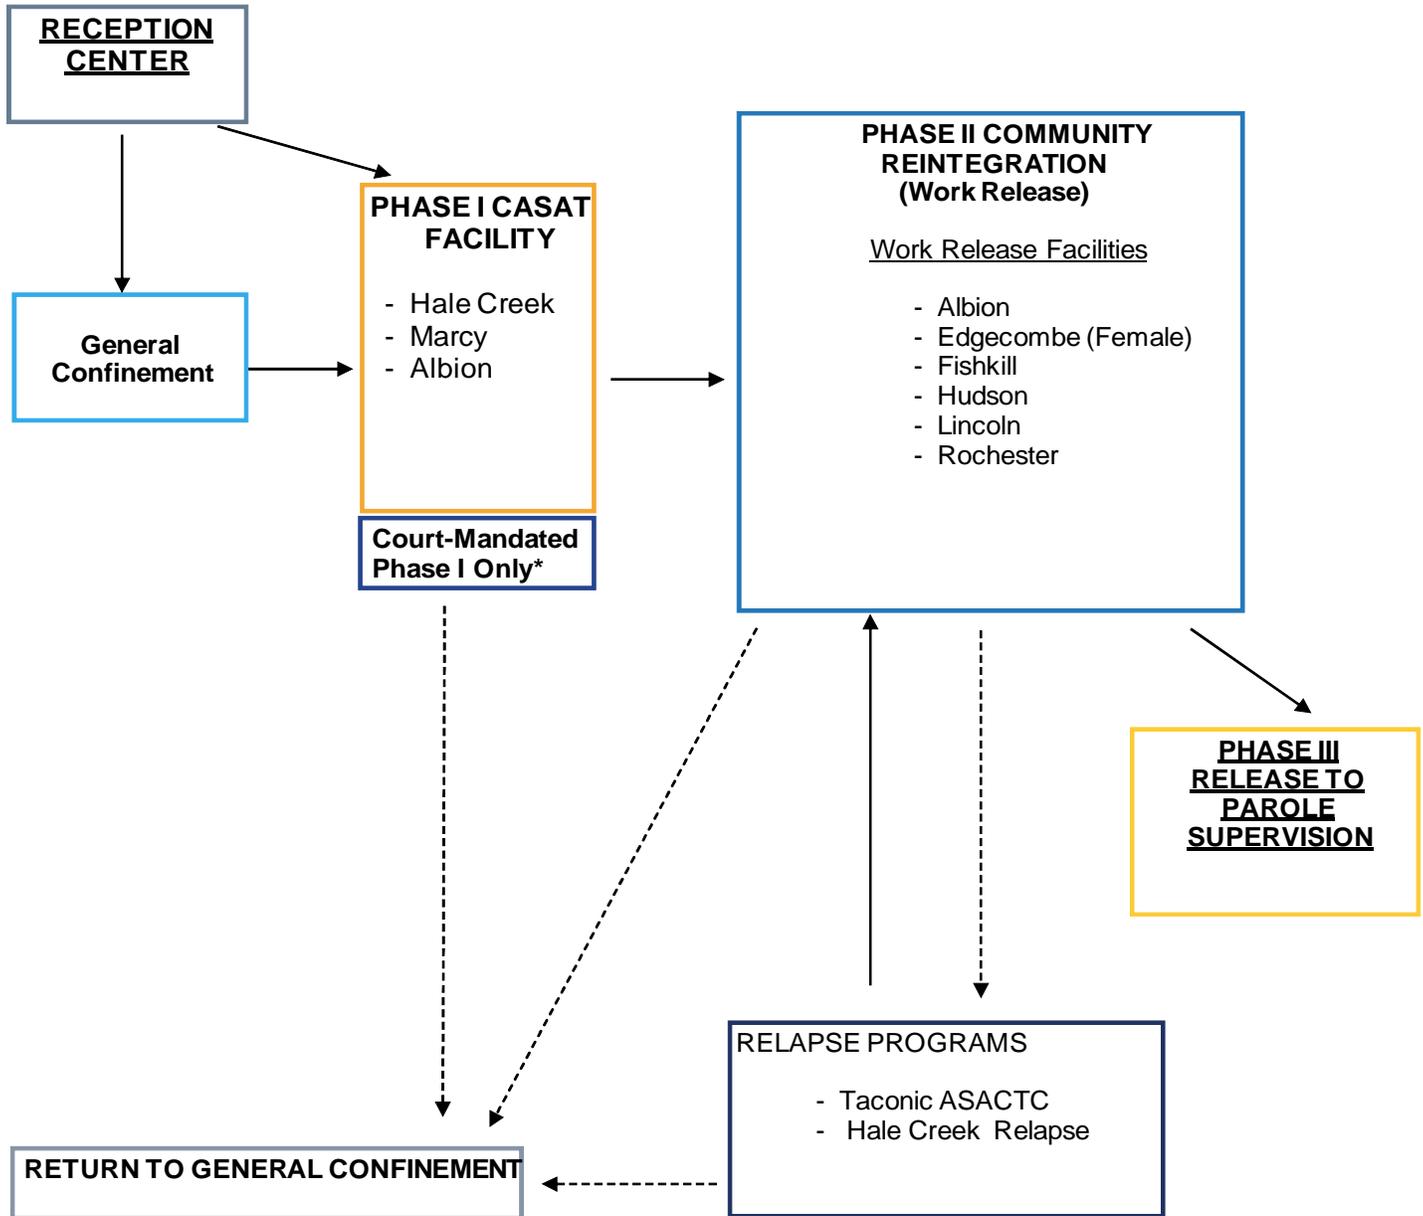

As such, the decline in drug commitments to NYSDOCCS can reasonably be expected to have an impact on the availability of inmates for this program.
