Executive Summary

Total Unusual Incidents

- There were 7,729 unusual incidents that occurred during 2014, with a rate of 146.0 per 1,000 inmates. The most frequent incidents were contraband (3,610), assaults on inmates (859), assaults on staff (747), and accidents (573).
- There were 4,399 incidents in maximum security facilities, with a rate of 187.8 per 1,000 inmates. Medium security facilities had 3,163 incidents, with a rate of 112.6. Minimum security facilities had 132 incidents, with a rate of 235.3, while Shock incarceration facilities had 23 incidents, with a rate of 27.1
- The number of unusual incidents has steadily increased over the past ten years, from 4,881 in 2005 to 7,729 in 2014, although much of this increase is likely due to improvements in reporting incidents.

Staff Assaults

- There were 747 staff assaults in 2014, with a rate of 14.1 per 1,000 inmates. There were 537 staff assaults in maximum security facilities, with a rate of 22.9, while medium security facilities had 190 (6.8), and minimum security facilities had 19 (33.9).

Inmate Assaults

- There were 859 inmate assaults in 2014, with a rate of 16.2 per 1,000 inmates. There were 475 inmate assaults in maximum security facilities (20.3), while medium security facilities had 380 (13.5), and minimum security facilities had 4 (7.1).

Contraband

- There were 3,610 contraband incidents in 2014, with a rate of 68.2 per 1,000 inmates. Most contraband incidents were either drugs (1,728) or weapons (1,584).
- There were 1,881 contraband incidents in maximum security facilities, with a rate of 80.3 per 1,000 inmates, while medium security facilities had 1,662 (59.1), minimum security facilities had 61 (108.7), and shock incarceration facilities had 6 (7.1).

Location of Incidents

- In 2014, the most frequent locations for unusual incidents were housing units (35%), yards (10%), walkways and corridors (9%), and Special Housing Units (9%).

Inmate Weapon Use

- Inmates used weapons in 27% of incidents in 2014. Use of body, such as fists or kicking was used in 13% of incidents, while cutting/stabbing weapons were used in 9% of incidents. Body attacks were most frequently used in staff assaults, while cutting/stabbing weapons were most frequently used in inmate assaults.

Staff Use of Force

- Staff used force in 1,282 incidents in 2014 (17%). Force was used most frequently in staff assault incidents.

Injury to Staff

- In 2014, 29,945 staff members were listed in unusual incidents. The vast majority of the time (96%), these staff members resolved the incident in question without injury. In 2014, 1,347 staff members reported injuries; of these, 1,143 were minor, 172 were moderate, 31 were serious, and one was severe.
- Assaults on staff had the highest number of staff injuries (942), although the majority of staff assault incidents (73%) did not result in any injuries. Accidents had the highest number of serious injuries (17) and the only severe injury in 2014.

Injury to Inmates

- In 2014, there were 9,432 inmates involved in unusual incidents. The majority of these inmates (68%) did not receive any injuries. A total of 2,976 inmates received injuries, with 1,867 minor injuries, 979 moderate, 125 serious, and five severe injuries.
- Most inmate injuries occurred in inmate assaults (1,123), disruptive behavior (595), staff assaults (468), and accidents (449). Most of the serious and severe inmate injuries occurred in accidents.

Deaths

- There were 131 deaths in 2014. Of these, 122 were inmates formally under DOCCS custody, five were staff members (four of these were off-duty), and four were detainees under NYS local jurisdiction that were at a DOCCS facility to receive medical attention.

Inmate Mental Health

- The majority of inmates (70%) were not on the OMH caseload at the time of the incident. The only incident types where a majority of inmates were on the OMH caseload were suicide attempts (73%), assault on other (57%), and fire (56%).

Introduction

The Unusual Incident System maintains information on incidents that occur within the New York State Department of Correctional Services and Community Supervision (DOCCS). Unusual incidents are serious occurrences that may impact upon or disrupt facility operations, have the potential for disrupting the Department's public image, or might arouse widespread public interest. All unusual incidents are reported by telephone to the DOCCS Communication Control Center located in Albany and entered into the computer system via terminals at correctional facilities.

The reporting system is capable of recording information on more than one type of unusual incident that occurs as part of a series of events. This system can also identify all inmates and staff listed in incidents, along with information about them, such as whether an injury was sustained by an inmate or a staff member, whether an inmate used a weapon, or whether a staff member used force.

This report includes information on unusual incidents that occurred during the current reporting year (January – December 2014), along with comparisons to trends in unusual incidents in the past ten years (2005 -2014). Where appropriate, rates of unusual incidents are presented in terms of the rate these incidents occur for every 1,000 inmates.

The report only covers incidents that occurred at DOCCS correctional facilities, and does not include incidents that took place at a Parole Diversion Program (PDP), Willard Drug Treatment Campus (WDTC), or those incidents involving parolees.

Sections of this report are devoted to staff assaults, inmate assaults, contraband incidents, incident location, inmate weapon use, staff use of force, staff injury, inmate injury, inmate deaths, and inmate mental health.

Section One: Frequency and Rate of Unusual Incidents in 2014

A total of 7,729 unusual incidents were reported in 2014. Table 1-1 shows the type and number of incidents that occurred each month during the year. The most frequently reported categories of incidents were contraband (3,610), assault on inmate (859), assault on staff (747) and accidents (573). Together, these four categories accounted for 75% of reported incidents.

Other Incidents	43	35	54	56	50	42	29	50	40	47	48	46	540
Total	605	574	675	697	643	676	591	696	654	651	556	711	7,729

Table 1-2 presents the number of unusual incidents in 2014 and the rate that they occurred by the average under custody population. The largest category is contraband, with 3,610 incidents. The rate for contraband is 68.2; this means that for every 1,000 inmates under custody, there were 68.2 contraband incidents. In 2014, DOCCS had an average under custody population of 52,939 inmates.

**Table 1-2. Unusual Incident Frequency and Rate
January - December 2014**

Incident Type	Number of Incidents	Rate per 1,000 Inmates

Table 1-3 displays the number and rate of unusual incidents in 2014 by the facility in which they occurred. For ease of reading, the tables in this report that display information on specific correctional facilities have been divided into three parts. The first part contains the maximum security facilities, the second contains medium security facilities, and the third contains the minimum security facilities and the grand total for all DOCCS facilities.

Attica, which is a maximum security prison, had an average inmate population of 2,098 and it experienced 410 unusual incidents, for a rate of 195.4 incidents for every 1,000 inmates. Rates are comparable, so if we look at Adirondack, which is a medium security facility with an average inmate population of 393 and an unusual incident rate of 94.1 incidents per 1,000 inmates, we would be able to say that Attica's unusual incident rate was approximately twice that of Adirondack's.

Note that the DOCCS Central Office does not have an unusual incident rate. This is because it does not maintain an under custody inmate population, so the rate (# of incidents divided by inmate population) is not possible to calculate since it would be dividing by zero. Throughout this report, instances where a facility (or sub-facility) does not have a current inmate population, "N/A" is displayed where the rate would be.

Table 1-4 contains information on the specific types of unusual incidents that occurred in each correctional facility. Here, we can look in closer detail at the 410 unusual incidents that occurred in Attica, we can look at Table 4 and see that nearly half of those incidents (193) were contraband. Other prominent categories at Attica included 64 incidents involving assaults on staff members and 45 incidents of assaults on inmates.

This table can also be used to examine where certain types of unusual incidents occurred. If, for example, we wanted to know which medium security facility had the highest number of contraband incidents, we can look down the contraband column and see that Wyoming had the most contraband incidents (150). We can also see that Attica and Great Meadow had the highest number of assaults on staff (64), while Clinton had the highest number of assaults on inmates (71).

Table takes the unusual incident information from Table 1-4 and presents it in terms of the rate of unusual incidents per 1,000 inmates.

Section Two: Ten-Year Trends in Unusual Incidents, 2005 - 2014

This section of the report contains information on unusual incidents from the previous ten years (2005 – 2014). As can be seen in Table 2-1, the number of unusual incidents has risen over time for several incident types, such as inmate assaults, staff assaults, and disruptive behavior. However, it is not possible to determine how much of the increase is due to new incidents occurring and how much is due to improved incident reporting practices.

Table 2-1. Unusual Incident Type by Year: 2005 - 2014

Incident Type	2005	2006	2007	2008	2009	2010	2011	2012	2013	2014

Other Incidents	315	336	404	381	394	496	549	487	532	540
Total	4,881	5,040	6,006	6,063	5,854	6,017	5,980	6,092	6,903	7,729

The four categories of accident, assault on inmate, assault on staff, and contraband made up 75% of unusual incidents in 2014, but only 67% in 2005. These four categories comprised 88% of the increase in unusual incidents in the past ten years. Contraband was the largest contributor to this increase, accounting for 68% of the increase in unusual incidents from 2005 to 2014. As can be seen in Table 5-3, most of this increase was in drug contraband incidents, which increased from 328 in 2005 to 1,728 in 2014.

Table 2-2 displays the number of unusual incidents that have occurred in each DOCCS correctional facility over the past ten years. Please note that this table includes several facilities that were closed during this time period. Appendix table A-1 contains inmate population information on DOCCS facilities for the 2005-2014 period, while table A-2 provides dates for when facilities were closed.

Table 2-3 takes the unusual incident information from table 2-2 and presents it in terms of the rate of unusual incidents per 1,000 inmates. For many facilities, this rate has fluctuated widely over the past ten years.

Section 3. Inmate Assaults on Staff

There were 747 inmate assaults on staff in 2014, with a rate of 14.1 per 1,000 inmates. Most of these assaults (72%) occurred in maximum security facilities, with 537 reported incidents and a rate of 22.9 staff assaults per 1,000 inmates. Medium security facilities experienced 190 staff assaults (25% of the total) at a rate of 6.8 assaults per 1,000 inmates. Minimum security facilities reported 19 staff assaults at a rate of 33.9 assaults per 1,000 inmates; all but two of these assaults took place at Queensboro. There was one staff assault at the DOCCS central office.

Table 3-1 displays the number and rate of staff assaults for 2014. The table provides information on the average daily population of each facility during the year, the number of assaults, and the rate of inmate assault on staff incidents per 1,000 inmates. Note the differences between Attica and Great Meadow, which were mentioned earlier in the report as both having 64 staff assaults. Attica's average inmate population in 2014 was 2,098 and Great Meadow's was 1,497, so even though they had the same number of staff assaults, Great Meadow had a higher staff assault rate (42.8) than Attica (30.5).

Table 3-2 displays number of staff assaults for the ten-year period from 2005 to 2014. Table 3-3 presents this information in rates per 1,000 inmates. There were 517 staff assault in 2005, with a rate of 8.2 per 1,000 inmates; the year 2014 had 747 staff assaults, with a rate of 14.1 per 1,000 inmates. Staff assault rates can vary widely at the facility level. Continuing to use Attica as an example, in 2014, Attica had its highest staff assault rate of the past ten years (30.5), while only two years prior in 2012, Attica had its lowest staff assault rate (14.1) of the past ten years.

According to Table 3-3, among the 17 maximum security facilities, eight had staff assault rates that increased from 2013 to 2014 and nine had decreases in the rate of inmate assaults. It should be noted that Table 3-3 presents five maximum security facilities where the rates of staff assault incidents were lower in 2014 as compared to 2005.

Table 3-1. Number and Rate of Staff Assault Incidents by Facility and Security Level: January - December 2014

Section 4. Inmate Assaults on Inmates

There were 859 inmate assaults on inmates in 2014, with a rate of 16.2 per 1,000 inmates. Most of these assaults (55%) occurred in maximum security facilities, with 475 reported incidents and a rate of 20.3 inmates assaults per 1,000 inmates. Medium security facilities experienced 380 inmate assaults (44% of the total) at a rate of 13.5 assaults per 1,000 inmates. Minimum security facilities reported 4 inmate assaults at a rate of 7.1 assaults per 1,000 inmates; all but one of these assaults took place at Queensboro.

Table 4-1 displays the number and rate of inmate assaults for 2014. The table provides information on the average daily population of each facility during the year, the number of assaults, and the rate of inmate assault on inmate incidents per 1,000 inmates.

Table 4-2 displays number of inmate assaults for the ten-year period from 2005 to 2014. Table 4-3 presents this information in rates per 1,000 inmates. There were 687 inmate assaults in 2005, with a rate of 10.9 per 1,000 inmates; the year 2014 had 859 inmate assaults, with a rate of 16.2 per 1,000 inmates. Maximum security facilities reported 478 inmate assaults in 2005, at a rate of 18.8 per 1,000 inmates; in 2014, there were 475 inmate assaults in maximum security facilities, at a rate of 20.3 inmates assaults per 1,000 inmates. Medium security facilities reported 199 inmate assaults in 2005, at a rate of 5.8 per 1,000 inmates; in 2014, there were 380 inmate assaults in maximum security facilities, at a rate of 13.5 inmates assaults per 1,000 inmates. Minimum security facilities reported 5 inmate assaults in 2005, at a rate of 2.0 per 1,000 inmates; in 2014, there were 4 inmate assaults in minimum security facilities, at a rate of 7.1 inmates assaults per 1,000 inmates.

Between 2013 and 2014, of the 17 maximum security facilities, there were six where the rate of inmate assaults declined. Additionally, there were seven maximum security facilities where the rate of inmate assaults declined between 2005 and 2014.

Section 5. Contraband Incidents

There were 3,610 contraband incidents in DOCCS correctional facilities in 2014 at a rate of 68.2 incidents per 1,000 inmates. The largest categories were drugs (48%) and cutting/stabbing weapons (44%).

Table 5-1 displays the various types of contraband incidents in 2014 by the security level of the facility in which they occurred. Maximum security facilities had 1,881 total contraband incidents (52%), medium security facilities had 1,662 (46%) contraband incidents, and minimum security facilities had 67 (2%). Of the total drug incidents, 919 (53%) occurred at medium security facilities, with 755 (44%) at maximum security facilities, and 54 (3%) at minimum security facilities. Medium security prisons had 521 synthetic drug incidents (77% of the total), while maximum security facilities had a majority of the marijuana incidents (77%).

Table 5-2 displays the types of contraband incidents that occurred at each facility during 2014. Here, we can see that Attica had a total of 193 contraband incidents, with most of these (97%) being either cutting/stabbing weapons (66%) or drugs (31%).

The types of contraband incidents found in DOCCS facilities in the ten-year period from 2005 to 2014 can be found in Table 5-3. Cocaine, Heroin, Marijuana, and Other Drugs were not consistently reported until 2007, and aside from a few incidents, synthetic drugs were not reported until 2013. Prior to 2007, most drug incidents were lumped together in the illegal drugs category, so it would be difficult to determine how much of the increase in drug incidents is due to more drugs being found in facilities and how much is due to more incidents being reported due to more a structured and rigorous reporting process. In 2014, synthetic drugs accounted for 39% of the drug contraband incidents, an increase from 2013 where synthetic drugs were 19% of the drug contraband incidents.

Table 5-4 displays the number of contraband incidents by facility and security level from 2005 to 2014, while Table 5-5 displays the same information in rates per 1,000 inmates. There were 2,431 contraband incidents in 2007, with a rate of 38.5 per 1,000 inmates; the year 2014 had 3,610 contraband incidents, with a rate of 68.2 per 1,000 inmates. Maximum security facilities reported 1,627 contraband incidents in 2007, with a rate of 63.7; in 2014, there were 1,881 contraband incidents in maximum security facilities, with a rate of 80.3 per 1,000 inmates. Medium security facilities reported 767 contraband incidents in 2007, with a rate of 22.6; in 2014, there were 1,662 contraband incidents in medium security facilities, with a rate of 59.1 per 1,000 inmates. Minimum security facilities reported 35 contraband incidents in 2007, with a rate of 14.1; in 2014, there were 61 contraband incidents in minimum security facilities, with a rate of 108.7 per 1,000 inmates.

According to Table 5-5, the rate of contraband incidents declined between 2013 and 2014 in seven maximum security facilities. Between 2005 and 2014, there was only one maximum security facility where the contraband rate declined.

Section Six: Unusual Incident Locations

This section details the locations in DOCCS facilities where unusual incidents occurred. Table 6-1 displays incident type by location. For most incident types, the most frequent incident location was housing units. This was the case for inmate assaults, staff assaults, contraband, disruptive behavior, and several other incident types. The exception to this is attempted suicides, where the largest number occurred in Special Housing Units (SHU).

Table 6-2 displays incident location information for the ten-year period from 2005 to 2014. Housing units were also the most frequent incident location over the past ten years.

Table 6-1. Unusual Incident Type by Location: January - December 2014

Section Seven: Inmate Weapon Use

This section details the weapons used by inmates in unusual incidents. Previous sections of this report were incident-based. This section of the report focuses on individuals inmates.. There were 9,432 inmates associated with unusual incidents in 2014.

Table 7-1 displays the most serious type of inmate weapon use for the unusual incidents that occurred in 2014. No weapons were used by 6,710 (71%) of the inmates linked to incidents. There were 1,542 (16%) inmates who used a fist, kick or other body attack; most of the inmates using body attacks were linked to staff assault incidents (652, 42%) and disruptive behaviors (602, 40%). The next most frequent weapon category was cutting/stabbing weapons; there were 780 inmates (8%) who used these weapons. The majority of cutting/stabbing weapon use (82%) occurred in inmate assault incidents.

Table 7-2 displays inmate weapon use by facility and security level for 2014. For maximum security facilities, a total of 5,296 inmates were linked to incidents. Of these inmates, 3,731 (70%) did not use any weapons, while 830 (16%) used body attacks, and 489 (9%) used cutting or stabbing weapons. For medium security facilities, there were 3,985 inmates linked to incidents. Of these, 2,866 did not use any weapons, while 679 (18%) used body attacks, and 288 (8%) used cutting or stabbing weapons. For minimum security facilities, a total of 133 inmates were linked to incidents. Of these, 98 (74%) did not use any weapons, while 30 (23%) used body attacks, and 3 (2%) used cutting or stabbing weapons.

Table 7-3 displays inmate weapon use in the ten-year period from 2005 to 2014. During this time, the total number of inmates using weapons has increased from 1,951 in 2005 to 2,722 in 2014. However, the percent of inmates using a weapon has decreased; in 2005, 32.0% of inmates used some type weapon, while in 2014, 28.9% of inmates used weapons in unusual incidents.

Table 7-4 displays inmate weapon use by security level for the ten-year period from 2005 to 2014. In 2005 at maximum security facilities, 16% of inmates used body attacks in incidents, while 12% used cutting or stabbing weapons. Ten years later in 2014, 16% of maximum security inmates used body attacks in incidents, while use of cutting or stabbing weapons had declined to 9% of inmates. In 2005 at medium security facilities, 19% of inmates used body attacks in incidents, while 6% used cutting or stabbing weapons. Ten years later in 2014, 17% of medium security inmates used body attacks in incidents, while 7% of inmates used cutting or stabbing weapons. In 2005 at minimum security facilities, 7% of inmates used body attacks in incidents, while 0.4% used cutting or stabbing weapons. Ten years later in 2014, 21% of medium security inmates used body attacks in incidents, while 2% of inmates used cutting or stabbing weapons.

Table 7-5 displays the rate of inmate weapon use per 1,000 inmates by security level for the ten-year period from 2005 to 2014. The rate of weapon use has increased in medium and minimum security facilities, but in maximum security facilities, although the rate of inmate weapon use in 2014 was lower than 2013. As a note, the sub-totals and grand total indicate the number of inmates per 1,000 who were linked to unusual incidents.

The types of inmate weapons used in unusual incidents in the ten-year period from 2005 to 2014 are found in Table 7-6. Here we can see that the use of cutting/stabbing weapons in inmate assault incidents has increased from 486 in 2005 to 641 in 2014. Cutting/weapon use decreased slightly in staff assault incidents, from 11 in 2005 to 10 in 2014.

Section Eight: Staff Use of Force

This section details the degree of staff force that was used in unusual incidents. If more than one type of staff force was used in an incident, the most serious type was selected. Staff force was used in 1,282 (17%) incidents in 2014.

Table 8-1 displays the most serious type of staff force used in each of the incident types that occurred in 2014. Inmate assault on staff incidents had the highest usage of staff force, with force being used in 82% of staff incidents. Contraband incidents had the lowest usage of staff force, with force only being used in 2% of contraband incidents.

Table 8-2 displays staff use of force by facility and security level. Maximum security facilities had 1,007 incidents where staff force was used, while medium security facilities had 256 and minimum security facilities had 18.

Table 8-3 displays staff use of force for the ten-year period from 2005 to 2014. In 2005, there were 4,881 unusual incidents, with staff force used in 837 (17%). In 2014, the number of incidents where staff force was used increased to 1,282, but the percentage of incidents with staff force remained the same at 17% of the total.

The types of staff force used in unusual incidents in the ten-year period from 2005 to 2014 are found in Table 8-4. Staff assaults, disruptive behavior, and inmate assaults consistently have the highest levels of staff force used.

Note: This table is based upon a count of the total number of incidents and the highest level of force used in each incident and it not a count of all the times that staff used force.

Section Nine: Staff Injury

This section details the injuries to DOCCS staff members, including the number of staff members injured and the extent of their injuries. The previous tables in this report have been incident-based; this section and the one that follows are individual-based. This means that instead of the total column summing the total number of incidents, it now sums the total number of staff members who were involved in an incident or incident category.

Table 9-1 displays the number of DOCCS staff that were injured and the type of unusual incident in which the injury occurred. Assaults on staff had the highest number of staff injuries (942), although the majority of staff assault incidents (73%) did not result in any injuries. Accidents had the highest number of serious injuries (17) and the only severe injury in 2014.

Table 9-2 displays the number of staff injured, the degree of injury received, and the facility where the injury occurred. Great Meadow had the highest number of staff injuries (103), while Sing Sing had the highest number of injuries that were serious or severe (6). The medium security prison with the most staff injuries was Fishkill (42), and the minimum security prison with the most staff injuries was Queensboro (18).

Table 9-3 displays the degree and type of staff injuries for the ten-year period from 2005 to 2014. Minor injuries were typically bruises, abrasions, pain, lacerations or sprains. Moderate injuries were usually bone injuries, lacerations, or bruises. Serious injuries were usually bone injuries, and the one severe injury in 2014 was a bone injury. The injury category of severe was added as an injury degree in October 2014; the injury type pain was added at the same time.

Table 9-4 displays the degree of staff injury by security level from 2005 to 2014. In 2005, there were a total of 751 staff injuries, while in 2014 there were 1,347. There were 14,483 staff listed in incidents in 2005, with 5% of these staff sustaining injuries. In 2014, there were 29,945 staff listed in incidents in 2014, with 4% of them sustaining injuries. The injury type categories of abrasion and pain were added in 2007 and 2014, respectively. This means that the percent of staff being injured saw a slight decline even though new injury types were being measured. To do a more accurate comparison, abrasions and pain were removed from the 2014 injury total, leaving 884 staff injuries in 2014. This means that, relative to the reporting standards in 2005, 3% of the staff listed in incidents in 2014 sustained injuries.

The degree of staff injury that occurred in each type of unusual incident during the ten-year period from 2005 to 2014 is presented in Table 9-5.

Table 9-1. Unusual Incident Type by Degree of Staff Injury: January - December 2014

Section Ten: Inmate Injury

This section details the injuries to DOCCS inmates, including the number of inmates injured and the extent of their injuries. The previous tables in this report have been incident-based; this section is individual-based. This means that instead of the total column summing the total number of incidents, it now sums the total number of inmates who were involved in an incident or incident category.

Table 10-1 displays the number of inmates that were injured and the type of unusual incident in which the injury occurred. Assaults on inmates had the highest number of inmate injuries (1,123), while accidents had the highest number of serious and severe injuries (62).

Table 10-2 displays the number of inmates injured, the degree of injury received, and the facility where the injury occurred. Clinton had the highest number of inmate injuries (208), while Franklin had the highest number of injuries that were serious or severe (14). The medium security prison with the most inmate injuries was Wyoming (163), and the minimum security prison with the most inmate injuries was Queensboro (24).

Table 10-3 displays the degree and type of inmate injuries for the ten-year period from 2005 to 2014. Minor injuries were typically bruises, abrasions, lacerations or sprains. Moderate injuries were usually bone injuries or lacerations. Serious injuries were usually bone injuries, as were severe injuries. The injury category of severe was added as an injury degree in October 2014; the injury type pain was added at the same time.

Table 10-4 displays the degree of inmate injury by security level from 2005 to 2014. In 2005, there were 6,097 inmates linked to incidents; of these, 1,898 (31%) were injured. In 2014, there were 9,432 inmates linked to incidents; of these 2,975 (32%) were injured.

The degree of inmate injury that occurred in each type of unusual incident during the ten-year period from 2005 to 2014 is found in Table 10-5.

Section Eleven: Deaths

Table 11 displays deaths that occurred during the ten-year period from 2005 to 2014. This includes deaths of inmates who were officially under the custody of DOCCS, DOCCS staff, and civilians in a DOCCS facility. Additionally, in 2014, DOCCS began admitting detainees under the custody of county jails to its Regional Medical Units (RMU). These detainees were not formally under DOCCS custody. Four of these detainees died in DOCCS facilities in 2014. Information in the unusual incident system on inmate cause of death was supplemented with medical reports prepared after autopsies. Of the inmates under DOCCS custody, 122 died in 2014. Five DOCCS staff members died in 2014, only one of whom was on-duty at the time. There were no civilian deaths in 2014. Overall, the number of deaths declined between 2005 and 2014.

Table 11. Deaths: 2005 - 2014

Section Twelve: Inmate Mental Health

This section examines the mental status of inmates connected to unusual incidents. Mental health services in DOCCS are administered by the Office of Mental Health (OMH). OMH is responsible for evaluating inmates and determining their appropriate level of mental health service. Inmates with an OMH level of 1-4 are considered to be on the OMH caseload with level 1 being the most serious and receiving the most frequent/intense level of mental health service, with level 4 being the least serious. A level 6 designation indicates that an inmate is not in need of mental health services, while level 7 indicates that the inmate has not received a mental health evaluation. There is not an OMH level 5. OMH did not begin evaluating inmates at reception until December 2007, so up to that point (and for a while thereafter) there was a significant portion of inmates at level 7 who had never received a mental health evaluation.

A separate designation of seriously mentally ill (SMI) exists to identify inmates at OMH levels 1 & 2 who have more significant mental health problems. In the tables that follow, SMI status is indicated with the categories of 1S and 2S.

The unusual incident system classifies inmates linked to unusual incidents by the role they had relative to those incidents. They can be classified as perpetrators, participants, suspects, victims, or witnesses/bystanders. This section focuses exclusively on the inmates who were classified as perpetrators, participants, or suspects.

Table 12-1 displays unusual incident type by the OMH level and SMI status of the inmates responsible for the incident. There were 7,293 involved in unusual incidents. Approximately 30% of these inmates (2,142) were on the OMH caseload at the time of the incident. The incident types where a large percentage of inmates were on the OMH caseload were self-inflicted injuries (93%), suicide attempts (73%), and staff assaults (45%); other incident types also had a high number of OMH cases, but only involved very few inmates, including attempted escape, property destruction, assault on other, and fire. SMI inmates comprised 61% of attempted suicides, 33% of self-inflicted injuries, and 18% of staff assaults, but only 5% of contraband incidents.

Table 12-2 displays the OMH level of inmates under custody by security level from 2005 to 2014. Note that the population figures used elsewhere in this report are based on daily average populations over the course of the year, while Table 12-2 is based on the under custody population during the first week of each month, averaged for the year, so there are slight variations between the two. In 2014, the majority of inmates (79%) were OMH level 6 and not on the OMH caseload. A total of 17% of DOCCS inmates were on the OMH caseload, and 23% of these inmates (or 4% of all inmates) were classified as seriously mentally ill.

Table 12-3 displays the OMH level of inmates linked to unusual incidents as perpetrators, participants, or suspects by the security level of the facility from 2005 to 2014. Table 12-4 presents the same information but in terms of the rate per 1,000 inmates at each OMH level. In 2014, inmates at OMH level 1 had a rate of 384.3; this means that, for every 1,000 inmates at OMH level 1, 384.3 were linked to an incident. This is three times the rate of 120.8 for inmates at OMH level 6.

Table 12-5 displays unusual incident type by the OMH level of the inmates linked to the incident from 2005 to 2014. The table indicates that, although the number of inmates involved in unusual incidents who are on the OMH caseload has increased, their proportion relative to other inmates has remained consistent across incident types over the past ten years.

Note: This table only includes inmates identified as perpetrators, participants, or suspects.

Appendix

Table A-1 displays information on prisons that have closed in the ten-year time period from 2005 to 2014, including the security level of the facility and the date it was closed. Table A-2 contains facility inmate population information for 2005-2014.

Table A-1. Prison Closures 2005-2014

Year	Facility	Security Level	Closure Date
2007	Marcy SHU200	SHU	12/26/07
2009	Camp Gabriels	Minimum Camp	07/15/09
	Camp Pharsalia	Minimum Camp	07/15/09
	Camp McGregor	Minimum Camp	07/15/09
	Lakeview Annex**	Medium	10/13/09
